CEO Musashi Presents at LINK-J Japan Night @Boston

On June 16, 2025, during the BIO International Convention 2025—one of the world’s largest biotechnology events—our CEO, Mr. Musashi, delivered a presentation at “LINK-J Japan Night @Boston,” held at the Federal Reserve Plaza in Boston, Massachusetts, where the Consulate-General of Japan in Boston is located.

At the event, Mr. Musashi introduced our lead asset, KUS121, which is currently under development for Central Retinal Artery Occlusion (CRAO)—often referred to as an “Eye Stroke” . He shared an overview of our science, development strategy, and partnering opportunities with an audience of investors and industry leaders.

This event was co-hosted by the **Life Science Innovation Network Japan (LINK-J)** and the **Consulate-General of Japan in Boston** to promote the global expansion of Japanese life science startups. It provided a valuable opportunity to connect Japanese companies with local investors, academic institutions, and industry leaders, helping to bridge startup ecosystems between Japan and the United States.
